To whom it may concern

As part of a £17m new build project at ESSA, Webber Engineering carried out and completed extensive elements of architectural metalwork on the project.

The provision of the feature central staircase in particular was a critical operation and was linked to the successful completion of the building. The process also involved a high degree of co-ordination with the Client and M&E contractor on key issues.

From the beginning to completion Webber provided an excellent service that ensured a successful conclusion of the project. A programme was agreed with Webber at the outset that included co-ordination, design, manufacture, delivery and installation to tight deadlines. We are please to say that Webber Engineering adhered to these timescales with aplomb.

The attention to health and safety of Webber operatives was excellent and the works were carried out in accordance with all required Kier procedures which are to a very high standard.

There have been no major issues over the quality of the work done which was of a high standard. On site there are always problems, and the measure is how well that they are addressed and we have had no reason for complaint. Diligently qualified Webber Engineering management were always on hand when requested to review and resolve any problems including the ability to adapt to issues and challenges not of Webber Engineering's making. The level of self knowledge of these individuals was very impressive and provided a level of confidence within Kier that we would achieve the contracted completion dates.

Webber Engineering, are a Company whom I would have no hesitation in recommending. Webber's approach to the various problems has been both refreshing and extremely helpful in ensuring a successful completion to the works at ESSA.
