33 – 35 Commercial Road, London. E1. 1LD

Webber Engineering

The above named company have executed a steel frame fabrication and trapezoidal deck supply and fix in tandem with a mixed metal work subcontract package on the above project having to date a contract value of circa £350k.

The contract works have been executed in extremely difficult conditions with the new the steel frame being installed on a progressive basis basement to roof over five storeys with the only access being a 2.00 X 2.00 m door aperture.

The programme for the works was aggressive with the main works being installed over 8 week's duration this from our initial order through to completion of the trapezoidal decking at the roof.

Throughout the period Webber have displayed a 'will do' 'can do' attitude exemplified by their senior management team in the form of the two proprietor /directors who accepted our project as a difficult challenge to which they identified and discharged all of the contractual responsibilities be that Safety, Commercial, or Programme with absolute dedication and total accountability. In regard to further projects with Mace Limited we would have no hesitation in employing Webber and we would recommend them to our competitor contractors without reserve.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'Tony Hughes', written over a horizontal line.

Tony Hughes

Project Director
